PROFILE SUMMARY

DevOps and Cloud fresher with hands-on internship experience in network monitoring, infrastructure automation, and secure network design. Comfortable working across Linux, AWS, Docker, and Kubernetes, and have built several personal DevSecOps and Kubernetes projects to learn CI/CD tools like Jenkins, ArgoCD, Trivy, and Terraform in more depth. Interested in roles where I can grow into secure CI/CD pipelines, monitoring, and deployment work.

TECHNICAL SKILLS

CI/CD & Automation: Jenkins, GitHub Actions, ArgoCD, SonarQube, Trivy, Git
Cloud & Infrastructure: AWS (EC2, S3, VPC, EKS, IAM, Lambda), Kubernetes, Docker, Kustomize, Helm, Terraform
Security & DevSecOps: SonarQube , Trivy
Monitoring & Observability: Prometheus, Grafana
Programming & OS: Python, Javascripts, Linux (Ubuntu), CCNA networking concepts

EDUCATION

Bachelor of Engineering in Electronics & Telecommunication **2022 - 2026**
MGM College of Engineering, Navi Mumbai

INTERNSHIP EXPERIENCE

Network Infrastructure & OFC Support Intern | Central Railway, CSMT Mumbai Jun 2025 - Jul 2025

- Reviewed railway OFC infrastructure and flagged vulnerabilities; suggested upgrades that improved reliability by about 15%
- Documented telecom infrastructure procedures and troubleshooting steps for the team
- Got hands-on with Linux CLI for network monitoring and supported change management work

HANDS-ON PROJECTS

Enterprise Online Boutique – DevSecOps & Kubernetes Deployment
Docker | Kubernetes | Kustomize | Jenkins | Trivy | Helm

- Deployed a 13-microservice e-commerce application on Kubernetes using Deployments, Services, Namespaces, probes, and Kustomize
- Built and pushed custom microservice Docker images to Docker Hub and managed image versions through Kustomize overlays
- Validated application health and service connectivity with Kubernetes commands and browser-based end-to-end testing
- Integrated Jenkins CI/CD and Trivy security scanning into the DevOps workflow

End-to-End DevSecOps Pipeline (Wanderlust Project)

- Built a CI/CD pipeline with Jenkins, Docker, and Kubernetes for a sample application
- Added SonarQube and Trivy scans into the pipeline to catch code and dependency issues early
- Used ArgoCD for GitOps-style deployments with rollback support
- Set up Prometheus and Grafana for monitoring and alerts
- Deployed the complete pipeline on a local Kubernetes cluster and validated end-to-end functionality

CERTIFICATIONS & TRAINING

- Cisco CCNA (200-301) - In Progress (RST Forum, Dadar)
